

Moving to New License Application Procedure

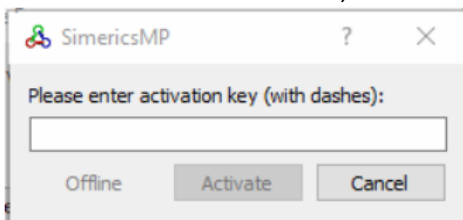

With the release of new version 5.0, **Simerics-MP/Simerics-MP+** are in the process moving to a new license application procedure:

For Node locked license:

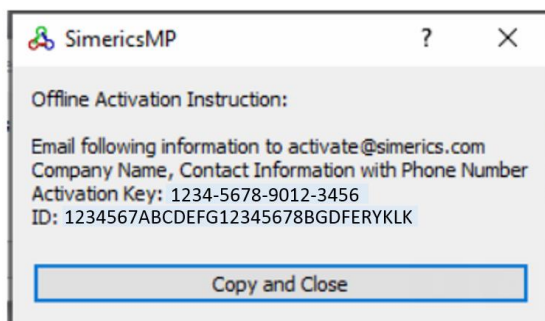

1. User apply for **Simerics-MP/Simerics-MP+** license
2. **Simerics** issue a license key (16 digit number) to the user
3. User download and install **Simerics-MP/Simerics-MP+** package
4. User start **Simerics-MP/Simerics-MP+** on the designated computer, (if no existing license) a "License Error" window will pop up.

5. Click "Node-Lock Activation", a new window will pop up:

6. Input license key (and the license key is **valid**), and two options "Offline" and "Activate" will be activated.
7. If computer is online (connected to internet), user can click "Activate" to activate the license directly.
8. If computer is offline (not connected to internet), click "Offline", a new window will pop up showing hardware ID of the computer. User can send all the information to **Simerics**, and **Simerics** will send back a license file.

For Floating License:

We are still using the old procedure at this moment (June 18, 2019). User needs to download and install *license Server Installation* package (currently version 12) and follow the instruction to get hardware ID and email to **Simerics** to get the license.
